

THE FEATURES OF BESTENERGY OIL

This product generates a highly active Nano barrier in the oil which originates through the special formulation of the Nano clusters and their extreme friction-diminishing and wear-diminishing features.

Seals, O-rings and Simmer rings are kept smooth.

- highly active wear protection
- the quickest oil penetration at cold start
- gentle and soft engine running
- improved engine power
- longer service life of the equipment units
- excellent emergency run features
- noise-reducing

THE AREAS OF APPLICATION ARE VARIED

BestEnergy Oil can be used in all engines and equipment units, like for example diesel engines and internal combustion engines with spark-ignition, also with turbo, cat. and soot filter, also for automatic and manual transmissions, differential, differential gear, both for Common Rail and also for the pump nozzle. Vehicle workshops trust in BestEnergy Oil, be-

cause it cleans the engine of the vehicle, increases engine power, guarantees a longer service life of the equipment units, removes soiling and resin in the oil circuits and has an optimal lubricating property with which it reduces engine noise and the oil and fuel consumption.

In the mining industry, BestEnergy Oil is used, for example, for lubrication of the huge dump trucks, belt conveyors, coal stackers, wheel loaders, excavators and trucks. Even in the garden one can use BestEnergy Oil as an engine oil for the lawn mower or the power saw. Here it also cleans the engines of the devices, has optimum lubrication features and removes soiling.

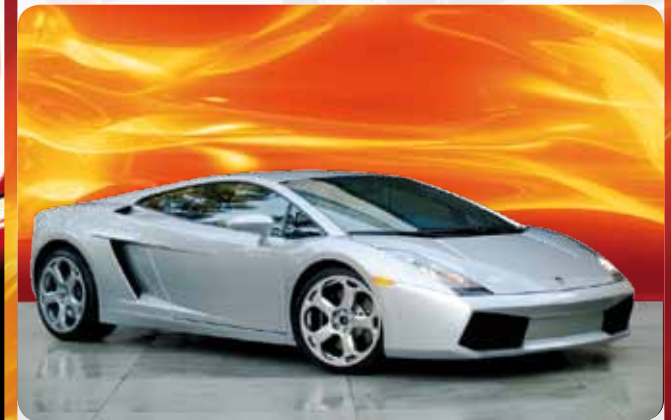

FUNCTIONS OF BESTENERGY OIL

BestEnergy Oil is tried, tested and is constantly evolving to ensure optimum performance of all gasoline and diesel engines.

Through the use of the oil, contamination and resin deposits are operationally removed throughout the oil and lubrication circuit, as well as the fuel and cooling system. Therefore the efficiency of gasoline and diesel engines is optimised and the engine power is fully exploited. In addition, aerosols for maintenance and servicing complete the full product range.

It exceeds the standards of the automobile manufacturers, reduces oil and fuel consumption, decreases friction and wear, protects against rust and corrosion, prevents deposits in the oil and lubrication circuit, neutralises harmful engine acids, protects against hot mud and prevents hardening of seals.

The oil guarantees an optimum lubrication of all movable parts and removes residues in the piston ring areas and upper cylinder areas.

OTHER ADVANTAGES:

- high shear and ageing stability
- high lubrication reliability at high and low temperatures
- rapid oil delivery at low temperatures
- mixable and compatible with commercially available engine oils
- ideal for modern petrol engines and diesel engines with multi-valve technology and turbocharging, as well as with and without charge air cooling
- optimised fuel consumption and oil consumption
- extended service life of the catalytic converter

The oil optimises the efficiency of engines and forms a heavy-duty lubricant and protective film on all friction and sliding surfaces. It decreases the coefficients of friction and guarantees a smooth and quiet performance of the equipment units.

Furthermore, it reduces exhaust emissions and optimises engine performance. Through its unique cleansing effect, BestEnergy Oil reduces friction and wear of individual engine parts, such as the piston, rings. Since it contains no simple alcohols, it has high lubricating

properties and guarantees optimum lubrication of all moving parts.
